## TABLE OF CONTENTS

<b>ABBREVIATIONS .....</b>	VII
GENERAL INTRODUCTION .....	XI
<i>Michael Alram, Jarosław Bodzek and Aleksander Bursche</i>	
<b>VOLUME I .....</b>	1
<b>1. GENERAL NUMISMATICS .....</b>	3
INTRODUCTION .....	5
<i>Jarosław Bodzek</i>	
THE HISTORY OF NUMISMATICS AND COLLECTIONS .....	7
<i>Stefan Krmnicek</i>	
NUMISMATICS, COMPUTERS, AND THE INTERNET .....	13
<i>Ethan Gruber</i>	
ARCHAEOLOGY AND ANTHROPOLOGY .....	21
<i>Fleur Kemmers</i>	
KUNST UND IKONOGRAPHIE (ANTIKE) .....	27
<i>Karsten Dahmen</i>	
SCIENTIFIC AND TECHNICAL APPLICATIONS .....	41
<i>Maryse Blet-Lemarquand and Gillian Davis</i>	
PROVENANCE AND LEGAL ISSUES .....	55
<i>Nathan T. Elkins</i>	
ANCIENT AND BYZANTINE WEIGHTS .....	65
<i>Charles Doyen</i>	
<b>2. THE GREEK WORLD .....</b>	97
INTRODUCTION .....	99
<i>Peter van Alfen</i>	
MONETARY INSTRUMENTS BEFORE COINAGE .....	101
<i>John H. Kroll</i>	
LA PENÍNSULA IBÉRICA .....	103
<i>Bartolomé Mora-Serrano</i>	
GAULE GRECQUE .....	115
<i>Marie-Laure Le Brazidec</i>	
ITALIA E MAGNA GRECIA .....	117
<i>Benedetto Carroccio</i>	
SICILIA .....	129
<i>Mariangela Puglisi</i>	
MAINLAND GREECE, CRETE AND THE ISLANDS OF THE AEGEAN AND IONIAN SEAS FROM THE ARCHAIC TO THE LATE HELLENISTIC PERIOD .....	155
<i>Selene E. Psoma</i>	
BALKANRAUM UND NÖRDLICHES SCHWARZMEERGEBIET .....	187
<i>Ulrike Peter und Vladimir F. Stolba</i>	
ASIA MINOR: ARCHAIC TO HELLENISTIC .....	253
<i>Aneurin Ellis-Evans, Ute Wartenberg and Jonathan Kagan</i>	
CYPRUS .....	293
<i>Evangeline Markou</i>	
THE LEVANT AND ARABIA BEFORE ISLAM .....	301

## GENERAL INTRODUCTION

*Michael Alram, Jarosław Bodzek and Aleksander Bursche*

We herewith present to readers a *Survey of Numismatic Research* prepared for the XVI International Numismatic Congress Warsaw 2022.

The Survey was created under very different conditions to earlier volumes owing to two key factors: the SARS pandemic and rapid developments in the use of digital tools.

Taking us all by surprise in the spring of 2020, the pandemic resulted in a prolonged and inconvenient lockdown, restrictions on movement, and – the most important factor from our perspective – the need to postpone by a year the XVI International Numismatic Congress, from September 2021 to September 2022. Most libraries were closed for lengthy periods, and only a few made part of their resources available online. In practice, this made it impossible for the authors of the Survey to include any studies of numismatic literature published since 2014. In this situation the Committee of the International Numismatic Council (INC), with the support of the sub-editors, took the only practicable decision, namely to extend work by a year. As a consequence, the time period covered by individual studies was increased to seven years (2014–2020). This alone not only considerably increased the workload of the authors and sub-editors but also substantially expanded the volume of the Survey.

The second factor that significantly influenced the shape of the present Survey was the progressing digital revolution, with the introduction of diverse new IT tools to assist the humanities, including extensive and specialized digital and bibliographic database repositories. An additional element to be taken into consideration was the growing cost of printing and distribution, and not least customs dues when sending books abroad.

Interestingly, a survey conducted among MA and PhD numismatics students in several EU countries revealed that almost none of them had ever held a physical copy of the Survey in their hands. They had, however on many occasions used texts they needed from the Survey available online, on Academia.edu, or other digital repositories. The INC has also taken this trend into

account and, with the help of The Newman Numismatic Portal, made all the volumes of the Survey accessible online on its website (INC cin (inc-cin.org)).

With this in mind, at a joint meeting of the INC Committee and sub-editors it was decided to prioritize the prompt publication in digital form of all the texts included in the new Survey, at the very latest by the first day of the Congress, 11 September 2022. Participants who will take a part in the congress in person will also find them on pen-drives distributed along with the congress materials. For libraries and scholars interested in the traditional paper format we have provided and will continue to provide the “print on demand” option. This will avoid the necessity of carrying heavy volumes while traveling, thereby incurring excess baggage charges, and also avoid shipping costs and possible customs duties. The publication will have a uniform appearance in every country and will be far cheaper than if ordered in its traditional form.

In this way we hope, as we say in Polish, that “the wolf is full and the sheep is whole” or as the English saying has it, “to have our cake and eat it”. As in the case of previous editions, the INC Committee established the group of sub-editors of the Survey, and together with the latter carefully selected the group of authors of individual texts from among the foremost specialists in a given subject. Very few of the scholars approached declined, indicating that the Survey continues to enjoy great prestige and popularity within our numismatic community.

For the first time ever, the Congress is being held in a country which lies outside the region traditionally regarded as Western Europe. For many of those attending the Congress this will also be their first visit to this part of Europe. Because of this, the present Survey accords more space than usual to the numismatics of East-Central Europe and Asia.

The task of covering seven years of numismatic research represents a huge challenge, and we were unable to achieve all that we had originally intended. In total the new Survey comprises 15,713 references. This

represents an increase of over 3,300 citations since the last Survey. While the general outline of the new Survey mostly follows the proven model, a number of new chapters have been introduced into **Section 1, General Numismatics**. “Archaeology and Anthropology” by Fleur Kemmers addresses those studies that aim at combining archaeological and anthropological methods in particular within the context of coin finds. The overview focuses on major research issues including the social embeddedness of coinage, coins as material culture and coinage in cult and ritual. Likewise new is Nathan Elkins’s chapter on “Provenance and Legal Issues”. Increasing numbers of coins are becoming the focus of the illicit art trade, treasure hunting and looting, and this chapter attempts to bring together a representative variety of perspectives and voices dealing with this sensitive topic. It is an important addition to the series about *Law and practice regarding coin finds* in the *Compte Rendu* which was started by the INC in the 1990s. The study of ancient weight systems is inextricably linked to coinage, and it is therefore quite remarkable that as yet a chapter on weights and metrological studies has been missing in the Survey. The chapter on “Ancient and Byzantine Weights” by Charles Doyen closes this gap, and demonstrates the impressive developments in this field in terms of new reference works, new analytical methods and new material from the archaeological context.

The digital world has now fully arrived in numismatics. Digital databases of collections, finds, hoards and archival records have not only become an indispensable tool for numismatic research but have also helped to define and answer new research questions. Moreover, it is an important tool for bringing numismatic research to a wider audience. Existing digital projects have been continued and expanded, and numerous new ones added. One of the most important achievements was the inception of Nomisma.org, strongly supported by the INC, which aims at enabling the interoperability of numismatic databases. One very positive trend over the past few years has been the increasing amount of national and international collaboration in the digital field. The chapter on “Numismatics, Computers, and the Internet” summarizes the latest developments.

In order to put the latest developments in numismatic research into perspective it is also necessary to be aware of the history of research in the field. The international FINA project (*Fontes Inediti Numismatae Antiquae*) studying the history of numismatic research before 1800 has made good progress, and the history of

research in the 20<sup>th</sup> century is also the focus of increasing interest.

Within the framework of **Section 2, The Greek World**, it is generally observed that coins from excavations are increasingly becoming the focus of scholarly research. Contextualized numismatic information is essential for answering questions about circulation patterns, trade flows, volumes of production and the monetization of ancient economies, and recent research has increasingly addressed these issues. Nonetheless, it should be noted that the vast majority of coin finds lack an archaeological context, a painful demonstration of how much knowledge is lost as a result. Another trend that has become more prominent in recent years are die studies, which provide insight into production processes and are complemented by technological and metallurgical analyses. There is also increased discussion about the role of bronze coins in the local economies, an area that has sometimes received too little attention in the past. A further remarkable development is the increased electronic availability of museum collections and thematic online databases which have meanwhile become indispensable research tools. In addition, the traditional printed museum catalog is still alive and remains an important documentation tool, especially for smaller collections or local museums.

Among the fifteen chapters of the Greek section “Balkanraum und nördliches Schwarzmeergebiet” stands out simply because of the large body of literature collected (850); compared to the last Survey the citations here have almost tripled. In this context reference should be made to the research project *Corpus Nummorum Online* (<https://www.corpus-nummorum.eu/>) which has had a noticeably stimulating effect. This is an open access numismatic web portal that aims to collect and present Greek and Roman provincial coinage from Moesia inferior, Thrace, Mysia and Troas.

The chapter on Asia Minor is second in place with 398 entries. The manifold research on electrum coinage deserves special mention here. It has changed our knowledge significantly, and has shown, among other things, that electrum coinage continued to flourish even in the early Classical period. Research on Seleucid coinage has also been particularly active. The references have more than doubled and cover a wide range of issues such as excavation coins, hoards, die studies, economic and monetary policies, the role and purpose of coinage and numerous other aspects. The focus of the investigations lies in the west of the Seleucid empire, while the east is less well documented. This is also reflected in the state of

research on the coinage of the Graeco-Bactrian and Indo-Greek kings, which, with only 32 entries, still has great research potential that has hitherto been insufficiently exploited.

**Section 3** is devoted to *Celtic and Roman Coinages*.

The major research trends are summarized by Roger Bland in his introduction. Celtic numismatics has produced numerous new findings over the past seven years. These result primarily from new coin finds that have brought new types and variants to light and show how limited our knowledge remains. Questions relating to money production, metrology, chronology, the identification of mints and the ethnic attribution of imitation series were also the focus of research interest. In addition, the monetization and Romanization of northern Gaul, the role of money in rural settings and the function of market places within the Celtic economies were examined. The emergence of money among the Gauls and its development over the centuries is a fascinating topic that has been made accessible for a broader audience. Here the new digital research tool *Iron Age Coins in Britain* (<https://iacb.arch.ox.ac.uk/>) deserves special mention.

A particular focus of research in recent years has been the coinage of the Roman Republic, resulting in new handbooks and articles in handbooks, as well as in specialized studies dealing with the technical aspects of monetary activities. Recent coin finds and hoards shed new light on chronological questions and give an insight into the supply of Roman coins to provincial territories. The new findings make it clear that the RRC, the previous standard citation work, is in need of fundamental revision.

There has been an enormous increase in research into the coinage of the early Principate, with citations nearly tripling to a total of 480. In general, the breadth of research topics published from the time of Augustus to Late Antiquity is impressive, and digital resources have assumed great importance. Period studies, studies of specific coin types and their target audiences, mints and their organization, the role of metal resources and monetary policy, the role of imitations produced outside the Empire, as well as die studies and metallurgical analyses have refined our image of Roman Imperial coin production in many respects. Likewise, intensified research into individual coin finds, hoards, coin supply, hoarding patterns, and coins in rural and funerary contexts has provided new insights into coin circulation and coin use inside and outside the Roman Empire. A further positive aspect is that in addition to the numerous catalogs and

detailed studies, the numismatic results are also placed in a broader historical, economic and social context. This is all the more important since there are frequent instances of single coins being detached from their numismatic context and thereby misappropriated by other disciplines.

The international RPC project (*Roman Provincial Coinage*) also made great progress during the reporting period: new volumes and supplementary volumes were published, and the material has also been made available online (RPC — Home ([ox.ac.uk](http://ox.ac.uk))).

**Section 4, Medieval and Modern Coinages**, also shows a notable increase in citations compared to the last Survey volume (up from 4,385 to 6,121). In line with research traditions, activities are usually concentrated in the individual countries and regions. This results not least in some articles being published in less well-known and less easily accessible journals. Their inclusion in the Survey is therefore of particular importance.

The general research tendencies already identified in relation to the numismatics of antiquity can also be observed in medieval and modern numismatics. In this section, too, numerous authors have pointed out the sharp rise in the number of coin finds and hoards, which they attribute to the increased prevalence of people using metal detectors. On the one hand, these new finds show us how incomplete our knowledge of the material still is. They give us the opportunity to close typological gaps, to recognize new connections and thus to rewrite individual chapters of our monetary history. On the other hand, they sometimes present us with legal problems, since searching with metal detectors is prohibited in many countries. However, the re-publication of old hoards based on current methods has also led to considerable new insights. One direction of focus has been on the documentation and evaluation of coin finds in European churches, which has shed light on religious practices and the devotional use of coins. In addition to the publications on coin corpora of individual mints, research is increasingly concentrating on contiguous currency areas that extend far beyond territorial borders. In regard to the coinages of medieval Europe (c. 400–1500), the MEC project (*Medieval European Coinage*) deserves special mention. Two volumes were published in the reporting period (*12. Italy. I: Northern Italy; 8: Britain and Ireland*) with the result that five of the 20 volumes planned have been published so far. The project brings together highly renowned scholars from various countries to create up-to-date handbooks which are indispensable for any further research. In putting together the most recent results and findings and

placing them in a broad historical and economic context MEC is creating a new picture of the monetary development in the different regions of Europe.

The growth in written sources in the Middle Ages and modern times has also made this type of source the subject of increasing research. Contemporary written sources on coin production, mint organization, legal issues, prices and wages, payment methods, tax issues and other topics related to economic and administrative history give a vivid picture of the world of money. In combination with the systematic analysis of the numismatic sources, this results in exciting new insights and interpretations of economic developments and decision-making processes.

It should also be noted that paranumismatica such as tokens, tickets, stamps, counters, seals and devotional objects are no longer disregarded by research.

Numerous numismatic exhibitions were also held during the reporting period which shed light on a wide variety of aspects of monetary history and thus brought numismatics to the attention of a wider audience.

The number of publications collected for *Asian and Islamic Coinages* has remained almost the same as in the last Survey (1,657 as compared to 1,612). This section also summarizes the contributions to research on the Sasanians, Kushans, Guptas and “Iranian” Huns, the study of which has made considerable progress.

With 713 citations, the clear focus in this section is, unsurprisingly, on the field of Islamic numismatics, although a decrease in citations compared to the last Survey volume can be noticed (down from 1,149 to 713). Despite the undisputed importance of this field of research today, it should be noted that curatorial posts for Islamic numismatics in many museums and coin cabinets are either completely absent or not filled again when they fall vacant. In general, the focus here is also on the recording and mapping of coin finds, as well as on mint and area studies. The research on the Caucasus region, the circulation of Islamic coins in Eastern Europe during the Viking period, and the study of Golden Horde coinage deserves special mention. Two volumes of the main reference work SNAT (*Sylloge Nummorum Arabicorum Tübingen*) were published during the reporting period.

Overviews of China, Japan, Cambodia, as well as Malaysia with the Indonesian islands and the Philippines complete the picture (*East and South East Asia*).

**Section 5** is dedicated to *Medals* and summarizes research from 15 European countries as well as the USA and Canada (the citations declined from 2,153 to 1,625).

As Tuukka Talvio pointed out in his Introduction it can be observed that curatorial positions at museums are no longer being filled. This is all the more regrettable since the medal, as an important cultural-historical phenomenon, opens up a wide field of research, as underscored by the numerous studies on medal production in certain regions, landscapes and cities, its historical context and use as propaganda, and its clients and recipients published in this reporting period. Another focus is on monographic studies on the life and work of individual artists, mint masters and engravers. In addition, medals always constitute an important element in cultural and art-historical exhibitions. In 2018 medals played a major role in numerous exhibitions commemorating the centenary of the First World War.

The art of the medal is still very much alive. The catalogs accompanying the biennials of the international medal society FIDEM in Sofia in 2014, Ghent and Namur in 2016, and Ottawa in 2018 provide an insight into contemporary medal art.

Finally, we would like to thank everyone who made the publication of the new Survey possible. First and foremost, thanks are due to the authors, who summarized and commented on seven years of numismatic research under the most difficult of conditions. We also owe a great deal of thanks to the sub-editors, who were in constant contact with their authors, wrote the appropriate introductions and edited the individual sections. We also thank our colleagues on the INC Board, who made language corrections where necessary. Last but not least we warmly thank our Polish colleagues who carried out the final editing and prepared the manuscript for publication, first of all Barbara Zajac and Dariusz F. Jasek.

**GAULE GRECQUE**  
*Marie-Laure le Brazidec*

**Commentaires**

Les publications relatives aux monnayages grecs en Gaule se sont surtout concentrées, pendant la période 2014–2020, sur des articles apportant des éclairages nouveaux sur certaines séries existantes, mais aussi des exemplaires inédits et cela pour les différentes périodes considérées. Plusieurs travaux de CHEVILLON ont contribué à la connaissance des monnayages de Marseille et à leur diffusion, que ce soit par des articles de synthèse (2) ou par des articles ciblés (3, 6, 7, 8, 10 et 14). Ainsi il rappelle que premier monnayage émis en Gaule, celui de la Marseille grecque, tient une place majeure dans le développement des séries attribuables aux Gaulois du Sud-Est et il y étudie sa diffusion (2). Avec LILLAMAND (13), il met en lumière des oboles massaliotes à l'ethnique présentant, pour la première fois, une légende exprimée en ionien « savant ». Les deux auteurs (14), après une première étude en 2006, examinent des oboles à l'ethnique sur lesquelles le A du revers est gravé à la main ou au burin après la frappe. Deux dépôts d'oboles ont été publiés : le premier, datable du milieu du V<sup>e</sup> s. av. J.-C., a été découvert sur l'oppidum de Marduel (18) ; le second, daté du début du IV<sup>e</sup> s. av. J.-C. (9), vient éclairer les moments charnières du retour définitif du motif de droit et d'un changement d'étalement des oboles massaliotes. Par ailleurs CASTA (1) s'intéresse aux influences de Syracuse sur le monnayage de Marseille.

Concernant la sphère de Marseille, CHEVILLON apporte de nouveaux éléments sur le monnayage archaïque de Théliné, l'Arles grecque (4 et 5). Fondation phocéenne, l'Arles archaïque va émettre peu après sa création, que l'on date des années 540–530 av. J.-C., ses propres monnaies. Après une approche large de ce nouveau monnayage archaïque pour l'Extrême-Occident grec, l'auteur donne sa vision actualisée du trésor de Volterra. Avec DUARTE (12), il présente un nouveau groupe d'oboles de cet atelier. Par ailleurs CHEVILLON et RIPOLLÈS reviennent sur la découverte d'exemplaires de ce monnayage en Ibérie (15). Les travaux de CHEVILLON, STANNARD et SCHLEGEL (16) examinent de façon approfondie les petits bronzes au taureau passant, ces petits bronzes massaliotes du 2<sup>e</sup> quart du I<sup>er</sup> s. av. J.-C, ce qui amène à positionner la frappe de ces monnaies au sein du Languedoc central. SALICIS revient sur les petits bronzes, d'imitation de Marseille, à légende KPIΞOC (19 et 20), en tranchant pour une attribution à un chef celto-ligure, Krixos ou Crixos, et en proposant une datation entre 125 et 49 av. J.-C.

Enfin, concernant la circulation monétaire, on notera les études de SALICIS pour le sud-est de la Gaule (21), incluant les monnayages de Marseille, et une obole de Marseille découverte en Espagne (17).
